

Wireless Audio Link IC

BH1414K

The BH1414K is a FM stereo transmitter IC that uses a simple configuration. This IC consists of a stereo modulator for generating stereo composite signals and a FM transmitter for broadcasting a FM signal on the air. A high S/N ratio and good timbre transmitter circuit can be composed with a few components. It is available for many applications due to the varieties of setting such as transmission output by serial data input.

●Applications

CD changer, Car TV, Car navigation, Wireless speakers, Personal computer (sound board), Game machine

●Features

- 1) It is possible to improve the timbre because it has the pre-emphasis circuit, limiter circuit, and the 19kHz/38kHz low-pass trap filter circuit.
- 2) Built-in pilot-tone system FM stereo modulator circuit.
- 3) The transmission frequency is stable because it has a PLL system for the FM transmitter circuit.
- 4) PLL data input (CE, CK, DA) by serial input.
- 5) It is possible for input level setting, monaural operation and output ON/OFF control by serial input.
- 6) It is possible for the transmission output control.

●Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Supply voltage	V _{CC1}	+9.0	V
	V _{CC2}	+10.0	
Power dissipation	P _d	500	mW
Storage temperature range	T _{stg}	-55~+125	°C

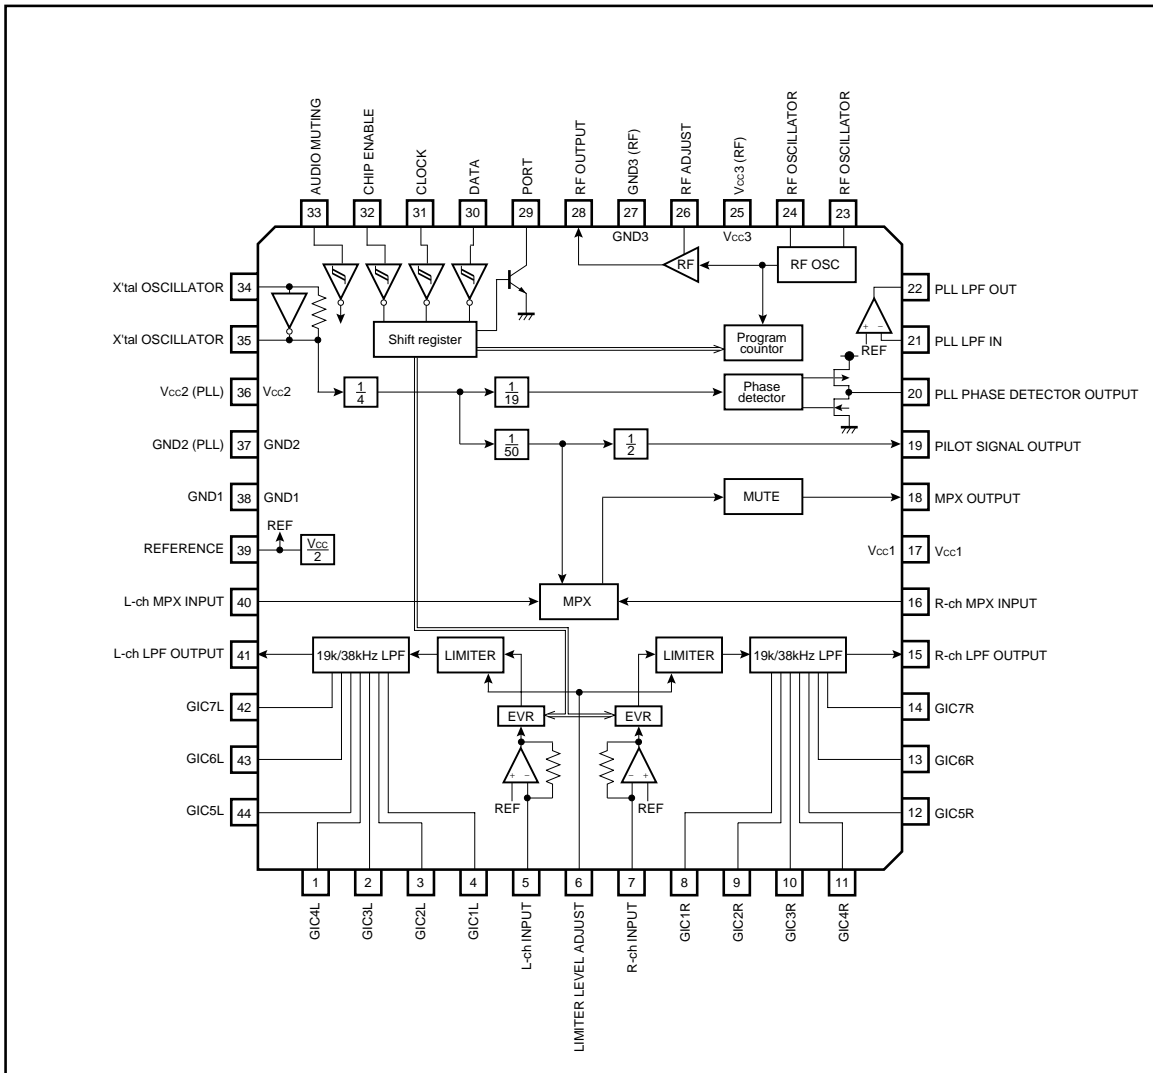

* Reduced by 5mW for each increase in Ta of 1°C over 25°C.

●Recommended operating conditions (Ta = 25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit
Operating supply voltage	V _{CC}	4.5	–	5.5	V
Operating temperature range	T _{opr}	-40	–	+85	°C
Audio input level	V _{IN-A}	–	–	500	mVrms
Audio input frequency	f _{IN-A}	20	–	15k	Hz
Transmission frequency	f _{TX}	75	–	110	MHz

●Pin descriptions

Pin No.	Pin name	Equivalent circuit	Description	DC voltage (V)
1 2 3 4 42 43 44	L-ch LPF time constant terminal		It connects resistor and capacitor.	$\frac{1}{2} V_{CC}$
8 9 10 11 12 13 14	R-ch LPF time constant terminal		It connects resistor and capacitor.	
15	R-ch LPF output and LPF time constant terminal			
41	L-ch LPF output and LPF time constant terminal			
5	L-ch audio source input terminal		It cuts DC with the capacitor and it inputs L-ch audio signal.	$\frac{1}{2} V_{CC}$
7	R-ch audio source input terminal		It cuts DC with the capacitor and it inputs R-ch audio signal.	
6	Limiter level adjust terminal		It adjusts a limiter level by the resistance.	$\frac{1}{2} V_{CC}$

Multimedia ICs

Pin No.	Pin name	Equivalent circuit	Description	DC voltage (V)
16	R-ch MPX input terminal			$\frac{1}{2} V_{CC}$
40	L-ch MPX input terminal			
17	Power supply 1 terminal	—		V_{CC}
18	MPX signal output terminal		It connects to the FM modulator.	$\frac{1}{2} V_{CC} - 0.7$
19	Pilot signal output terminal		It connects to the FM modulator.	$\frac{1}{2} V_{CC} - 0.7$
20	PLL phase detector output terminal		It connects to the PLL LPF circuit.	—
21	PLL LPF input terminal			—
22	PLL LPF output terminal			

Multimedia ICs

Pin No.	Pin name	Equivalent circuit	Description	DC voltage (V)
23	RF oscillator terminal		<p>This is the colpitts oscillator. It connects time constant of the oscillation.</p>	$\frac{5}{9} V_{cc}$
24				$\frac{5}{9} V_{cc}$ -0.7
25	Power supply 3 terminal (RF)	—		V_{cc}
26	RF adjust terminal		It connects resistor and capacitor.	$\frac{3}{4} V_{cc}$ -0.9
28	RF transmission output terminal		It connects LC.	V_{cc}
27	GND3 (RF)	—		GND
29	Port output terminal			-
30	Data input terminal		The input terminal of the serial data which is forwarded from the controller.	-
31	Clock input terminal		The clock which takes data and synchronization in serial data input.	
32	Chip enable terminal		The terminal to make high level in serial data input.	
33	Audio mute terminal		$0.8V_{cc2} \leq \text{Pin33} : \text{Mute OFF}$ $0.2V_{cc2} \geq \text{Pin33} : \text{Mute ON}$	

Multimedia ICs

Pin No.	Pin name	Equivalent circuit	Description	DC voltage (V)
34 35	X'tal oscillator terminal		It connects a 7.6MHz crystal oscillator.	-
36	Power supply 2 terminal (PLL)	—		V _{cc}
37	GND2 (PLL)	—		GND
38	GND1	—		GND
39	Reference voltage terminal		It is a ripple filter for the reference voltage.	$\frac{1}{2} V_{cc}$

●Circuit operations

(1) Input of the serial data

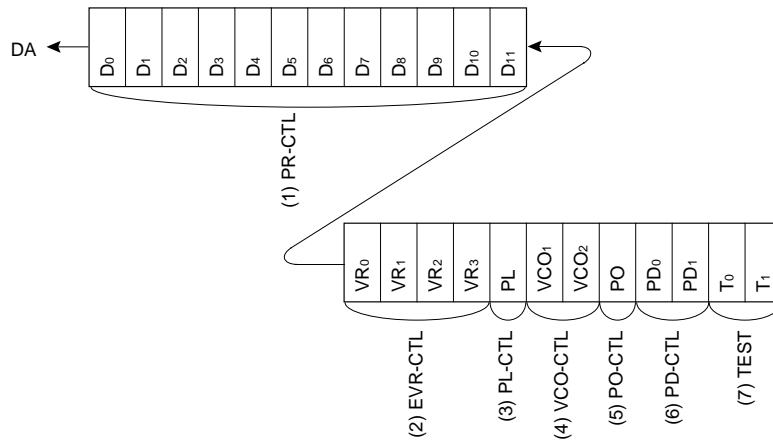

$t_1, t_2, t_3, t_4 \geq 1.5\mu\text{sec}$
 $t_5 < 1.5\mu\text{sec}$ (X'tal : 7.6MHz)

When the serial data input terminal (Pin 30, Pin 31, Pin 32) and the mute control terminal (Pin 33) connect with the $\mu\text{-com}$, in off the power of BH1414K and on the power of $\mu\text{-com}$, because the current flows backward from the $\mu\text{-com}$ to BH1414K, insert limitation resistance between the serial data input terminal and the data output terminal of $\mu\text{-com}$. But, when the data output by $\mu\text{-com}$ doesn't always maintain at the "H" voltage, that matter may be left out of consideration.

(2) Composition of the serial data
