STC3117 evaluation board

Features

- Patented OptimGaugeTM algorithm for accurate battery capacity calculation
- Robust initial open-circuit-voltage (OCV) measurement at power up
- Programmable low battery alarm
- Missing/swapped battery detection
- Average current internal calculation
- End-of-Charge detection
- Internal temperature sensor
- Battery swap detection with protection against false battery insertion
- Low power 40 µA in voltage-only, 2uA max. in standby mode
- 1.49 x 1.594 mm 9-bump CSP package
- RoHS compliant

Description

The STC3117 includes the STMicroelectronics OptimGauge™ algorithm. It provides accurate battery state-of-charge (SOC) monitoring, tracks battery parameter changes with operation conditions, temperature and aging, and allows the application to get a battery state-of-health (SOH) indication.
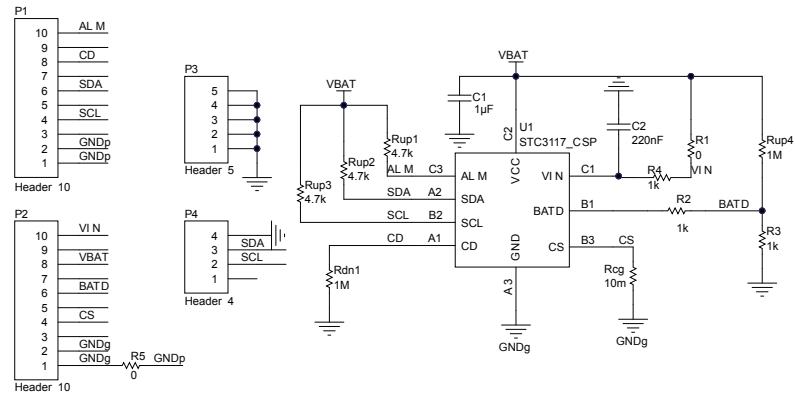

An alarm output signals low SOC or low voltage conditions and also indicates fault conditions like a missing or swapped battery.

Summary table	
Gas gauge IC with battery charger control for handheld applications	STC3117

DB2215 - Rev 2 - June 2018
