Description: These beefy aluminum enclosures may look rough, but they're built tough. This 2mm-thick, die-cast enclosure is rated IP54 against dust and splashing water. Because it's aluminum, it's easy to cut and drill so that you can add LCD screens, buttons and cable connections. If you want to "pretty up" your project, hit this with some fine-grit sand paper and buff it or just spray paint it!

These enclosures were originally sold for the production of "stomp box" style effects pedals. Try combining this with our stomp switches (in the related items below) and some of your own secret sauce circuitry to build a sweet custom pedal.

The lid mates nicely to the top of the enclosure and is secured with 10mm long M3 screws (included).

Dimensions: 112x60x31mm
